## **BREAKING NO BACKS:** Reducing Caregiver Injury Risks

As America's patient populations are aging and becoming more obese, the occupational risks for caregivers are greater than ever.

Poor patient handling practices put strain on caregivers and also put patient safety at risk.

of practice administrators

indicated their employees were trained to lift a patient.3

of administrators

acknowledged that parts of an exam were skipped when a barrier was encountered.3

of practices offer a mechanical lift

to transfer patients.3

Greater risk of misdiagnoses

Poorer quality

of care

Missed benefits

of early detection

A peer-reviewed study by Guy Fragala PhD, PE, CSP, CSPHP,

sponsored by Midmark, evaluated perceived exertion by caregivers.

Experienced caregivers performed two tasks: assisting a 235-pound

How can we help caregivers and patients safely

get the most from their point of care interactions?

patient with limited mobility onto a traditional fixed-height exam table and then onto a height-adjustable exam chair. Traditional fixed-height exam table Height-adjustable (similar to those found in many clinics) exam chair

less exertion less exertion less exertion on shoulders on lower back on upper back

96.75% average reduction in perceived physical exertion using a height-

adjustable exam chair<sup>3</sup>

patient lifts using a fixed-height table were deemed unsafe<sup>3</sup>

"The exam table is the central and most important furnishing in the ambulatory care clinic. This research demonstrates that using height-adjustable, accessible exam chairs can improve the

risk to caregivers while improving quality of care for patients."
